

Ethereum to Tenge KZT: Exchange ETH in Kazakhstan to Bank Card using <https://www.cash-partners.com/exchange-ethereum-tenge-kzt-bank-card.html>

You can exchange Ethereum (ETH) to a Kazakhstan bank card in KZT via the Cash-Partners exchanger by filling out their form, sending ETH to the address they provide, and waiting for 1 blockchain confirmation before funds are credited to the card.^[1]

How the exchange works

- On the Cash-Partners ETH → KZT card page, you enter the amount of ETH, your Kazakhstan bank card details, and contact information, then create an order.^[1]
- After creating the order, you send ETH to the wallet address shown in the instructions, and the system tracks your transaction on the blockchain.^[1]
- Once the transaction gets 1 network confirmation, the exchanger processes it and sends KZT to your bank card, with the order status visible on the "Order status" page.^[1]

Steps to follow

1. Fill in all fields in the exchange form (amount of ETH, card number, name, etc.).^[1]
2. Click the "Exchange" / "Create order" button, agree to the service terms, and confirm the order.^[1]
3. Transfer the exact ETH amount to the address and/or QR code given in the order instructions.^[1]
4. Wait for 1 blockchain confirmation; after that, KZT is sent to your card and you can monitor progress on the order status page.^[1]

Conditions and cards supported

- The service states that Visa and MasterCard bank cards issued by Kazakhstan banks are accepted (it positions them as "100% accepted").^[1]
- The exchanger is oriented to users of major crypto platforms (Binance, MEXC, Bybit, OKX, Kraken) and common wallets (MetaMask, Exodus, Coinbase, SafePal), so you can send ETH from any of these.^[1]

Rate and risks

- The concrete rate (for example, around 1.5–2.4 million KZT per 1 ETH on large exchanges recently) depends on the current market price and the exchanger's margin and is usually fixed at the moment you create the order.^{[2] [3] [4]}
- The site emphasizes no KYC/AML, fast processing after 1 confirmation, and suitability for tourists and investors, but this also means you should treat it as a high-risk service and start with a small test amount, checking independent exchanger listings and reviews for reputation.^{[5] [6] [1]}
