

## How Do the Ethereum (ETH) Mixer <https://www.cash-partners.com/cryptomixer/ethereum-mixer.html> Works

The Ethereum mixer at [cash-partners.com](https://www.cash-partners.com) functions as a custodial service that obscures transaction traceability by pooling user ETH deposits and redistributing mixed funds to specified clean wallets.<sup>[1]</sup>

### Process Steps

Users initiate mixing by entering the ETH amount (minimum 1 ETH, maximum 430 ETH) on the site's exchange form, where 1 ETH yields approximately 0.99 ETH after a 1% fee. They then submit the form, provide an email/username for account creation, and list 1-4 receiving wallet addresses before sending funds to the mixer's account. Once blockchain confirmation occurs, the service mixes the cryptocurrency—likely by combining it with other users' funds—and sends it to the provided addresses, claiming untraceability on public blockchains.<sup>[1]</sup>

### Key Features

- Supports wallets like MetaMask, Exodus, Ledger, TrustWallet and exchanges such as Binance, OKX, MEXC.<sup>[1]</sup>
- No KYC required; process completes in minutes after confirmation.<sup>[1]</sup>
- Current reserve stands at 41.1 ETH, with dynamic rates refreshing periodically.<sup>[1]</sup>

**Warning: Crypto mixers like this carry high risks of scams, fund loss, and association with illegal activities such as money laundering, which are prohibited in most jurisdictions.**

General mixer mechanics involve pooling and redistributing funds for anonymity, but services like this often lack transparency and security audits.<sup>[2]</sup> <sup>[1]</sup>
